

FIREARM-related fatalities • HOMICIDE, • SUICIDE, & • UNINTENTIONAL in US CHILDREN & YOUTH

Homicide is the **second** leading cause of death among youth*

From 2005-2010:

WISQARS (2005-2010)

From 2005-2010, **83%** of all youth* homicides involved a firearm

WISQARS (2005-2010)

Youth* make up **29%** of homicides and **35%** of firearm-related homicides, but only **14%** of the population

WISQARS (2005-2010)

From 2005-2010, firearms were used in **nearly half** of all suicides by youth*

WISQARS (2005-2010)

More than **1 out of 3** suicides of those under age 18 occurred the same day as a crisis (such as an argument with a parent or a break-up)

SPRC (2002)

When someone under the age of 19 uses a firearm to complete suicide, it usually belongs to a family member

In **2 out of 3** cases, the firearm was kept unlocked

SPRC (2002)

177

64

On average, **177 youth*** and **64 children**** die of unintentional shootings every year

WISQARS (2000-2010)

Preventing unintentional fatal shootings of children** and youth* in the US could have saved over

in 2005 alone
WISQARS (2005)

Unintentional shootings make up **16%** of firearm-related deaths in children** compared to **2%** for the general public

WISQARS (2005-2010)

*Youth are defined as ages 15-24
**Children are defined as ages 0-14
